ONE PROBLEM

THEY WERE ALL
ROBBED

**HOW COULD WE AVOID THE ROBBING
OF SAUSAGE SALESMEN?
(AND SALESWOMEN)**

SO WE DID SOME
THINKING...

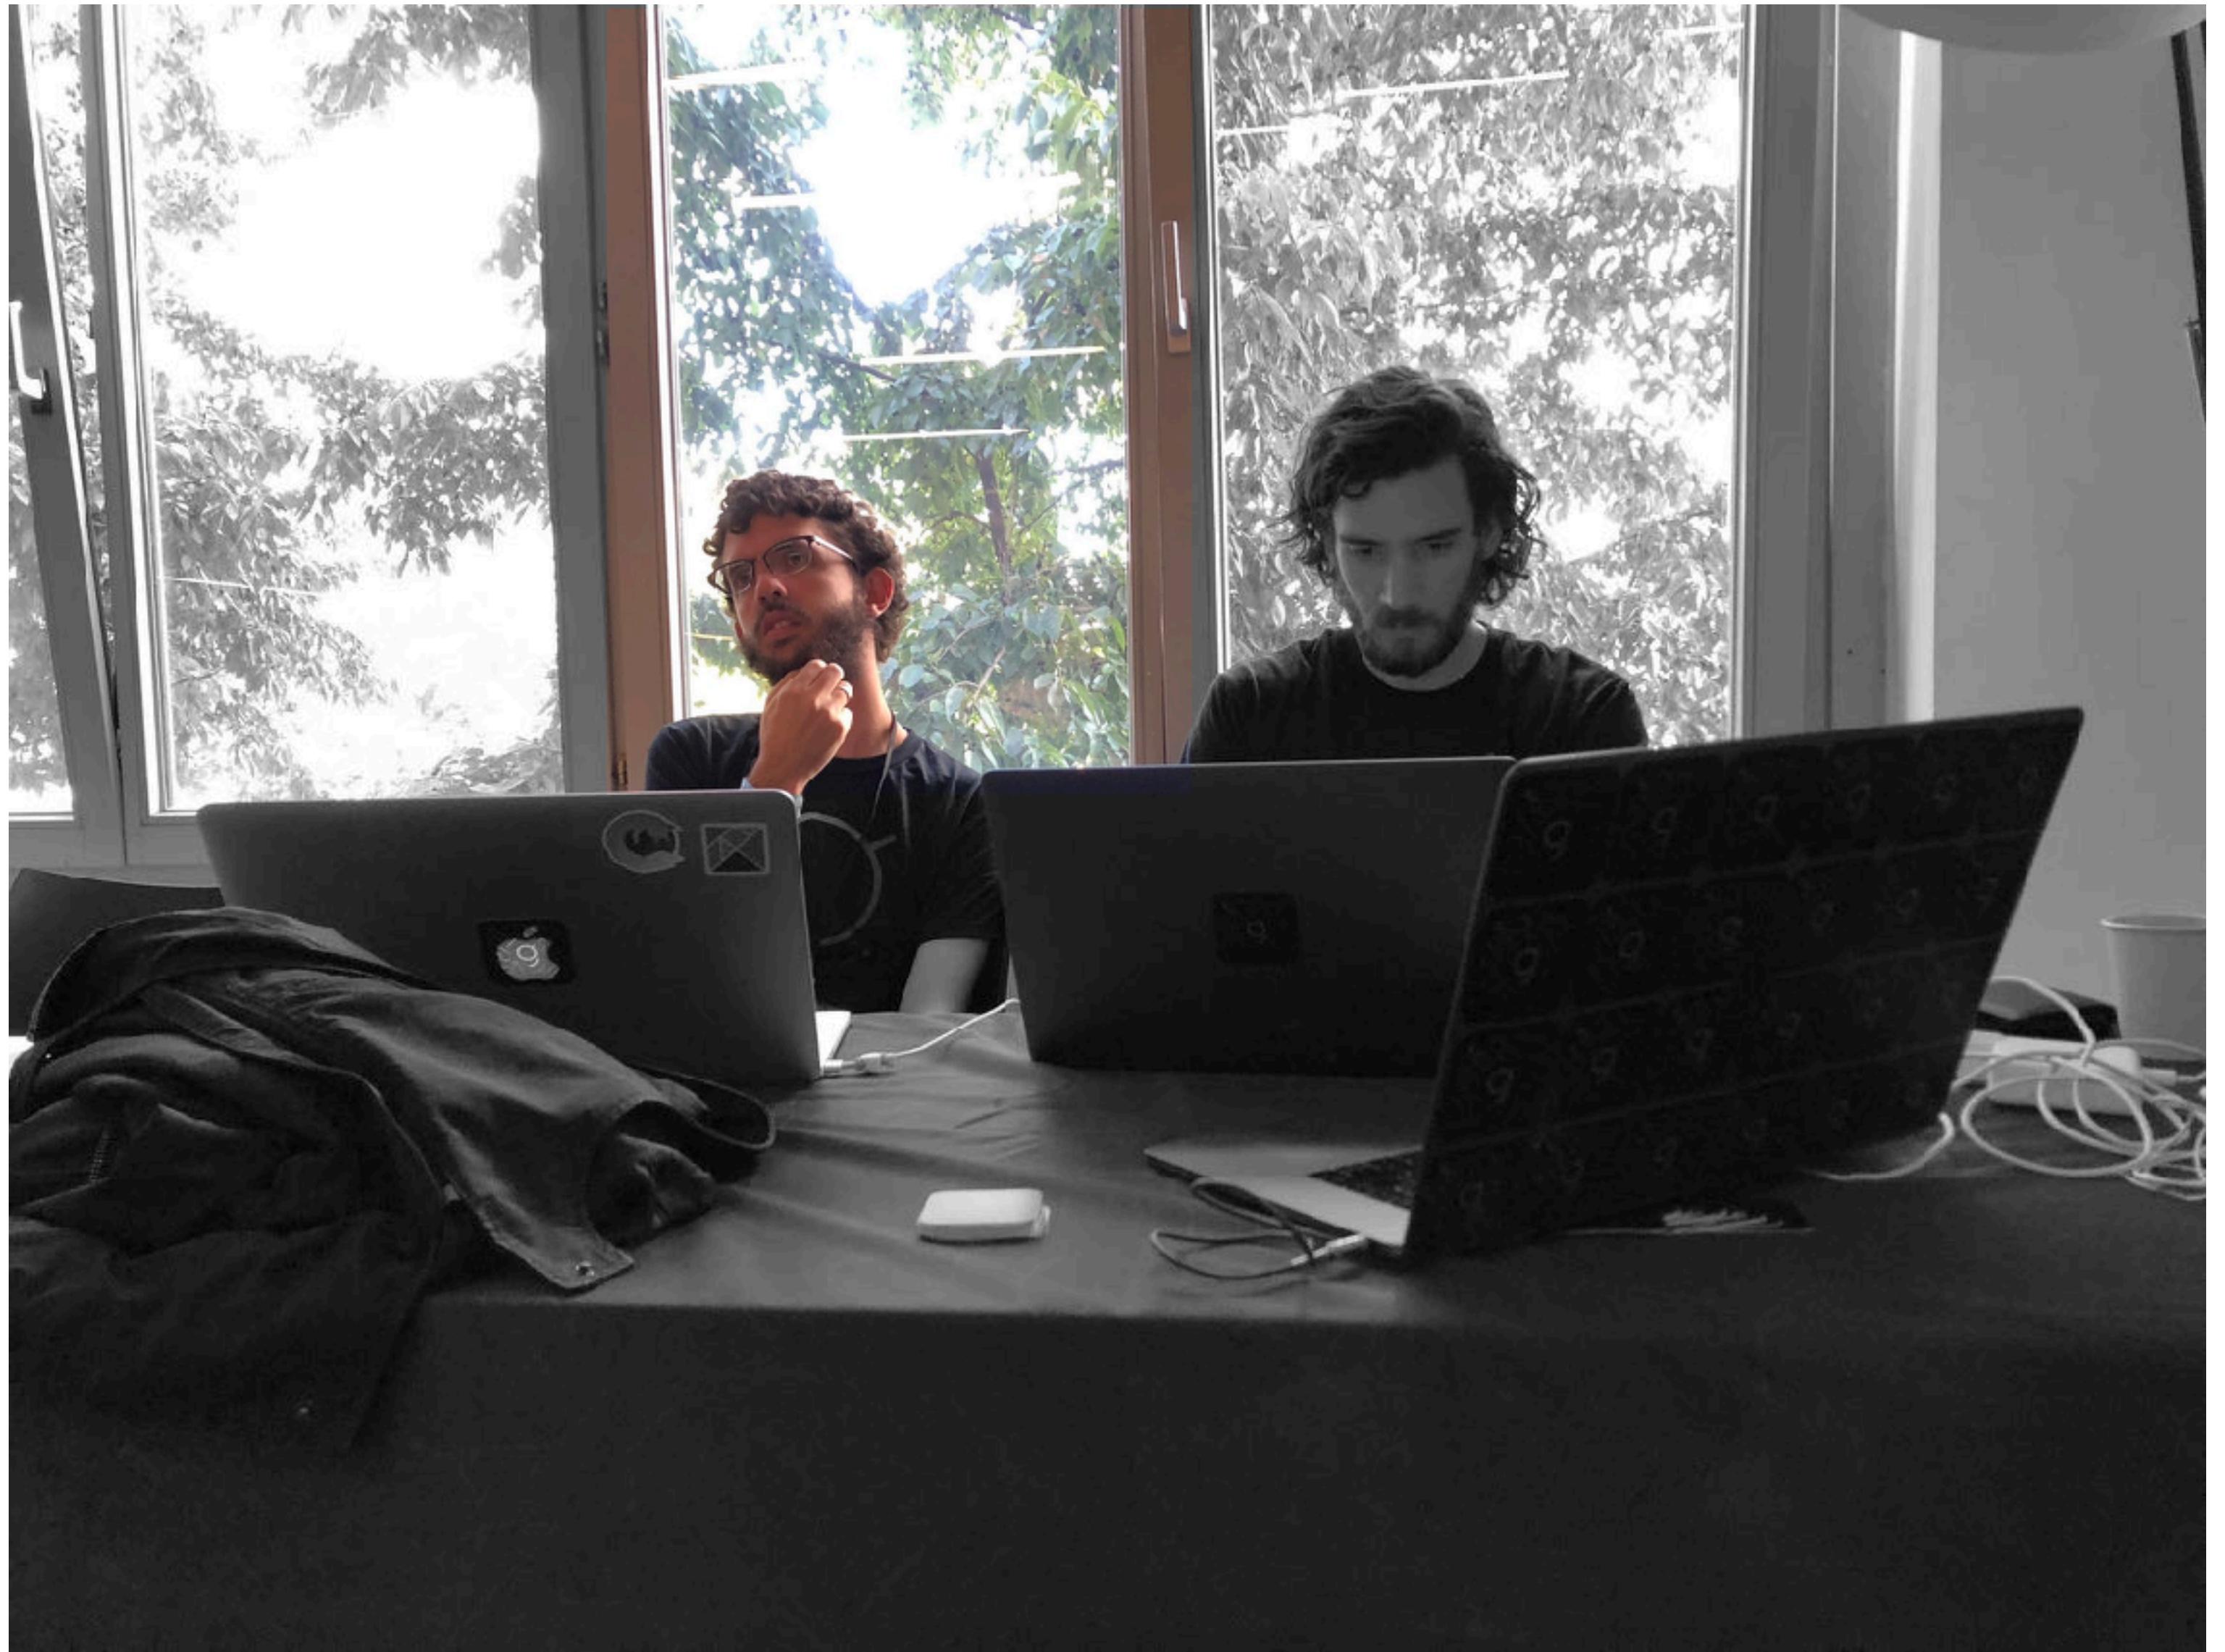

...AND SOME MORE
THINKING

...WE ALMOST GAVE UP

**...BUT THEN, WE
HAD AN EPIPHANY**

THE SOLUTION

WHAT IF...

**FIVE YEARS FROM
NOW, EVERY SAUSAGE
IN GERMANY WILL BE
PURCHASED WITH
BITSAUSAGE**

BITSAUSAGE

**THE WURST
CRYPTOCURRENCY IN
THE UNIWURST**

COMPONENTS

SMART CONTRACT

- A new BitSausage NFT-token is minted every X seconds, based on stats about annual sausage consumption in Germany
- Each BitSausage Token is of a different type — currywurst bratwurst, etc.

SUBGRAPH BACKEND

- The Subgraph sources all the Auction Events, which allows for a smooth developer experience for creating a live up-to-date Dapp

BITSAUSAGE DAPP

- The Bit Auction Dapp gives German's the ability to purchase a BitSausage Token
- They can then exchange it for a real-life, edible sausage

HOW IT WORKS

THE SCHEMA

```
type Auction {
    id: ID! @unique
    seller: User
    bids: [Bid!]! @relation(name: "AuctionOnBids")
    currentBid: Bid @relation(name: "AuctionOnCurrentBid")
    previousBid: Bid @relation(name: "AuctionOnPreviousBid")
    expirationTime: DateTime
    item: SausageToken
}

type Bid {
    id: ID! @unique
    amount: Int!
    timestamp: DateTime
    bidder: User
    auction: Auction @relation(name: "AuctionOnBids")
}

type SausageToken {
    id: ID! @unique
    type: BitSausageType
}

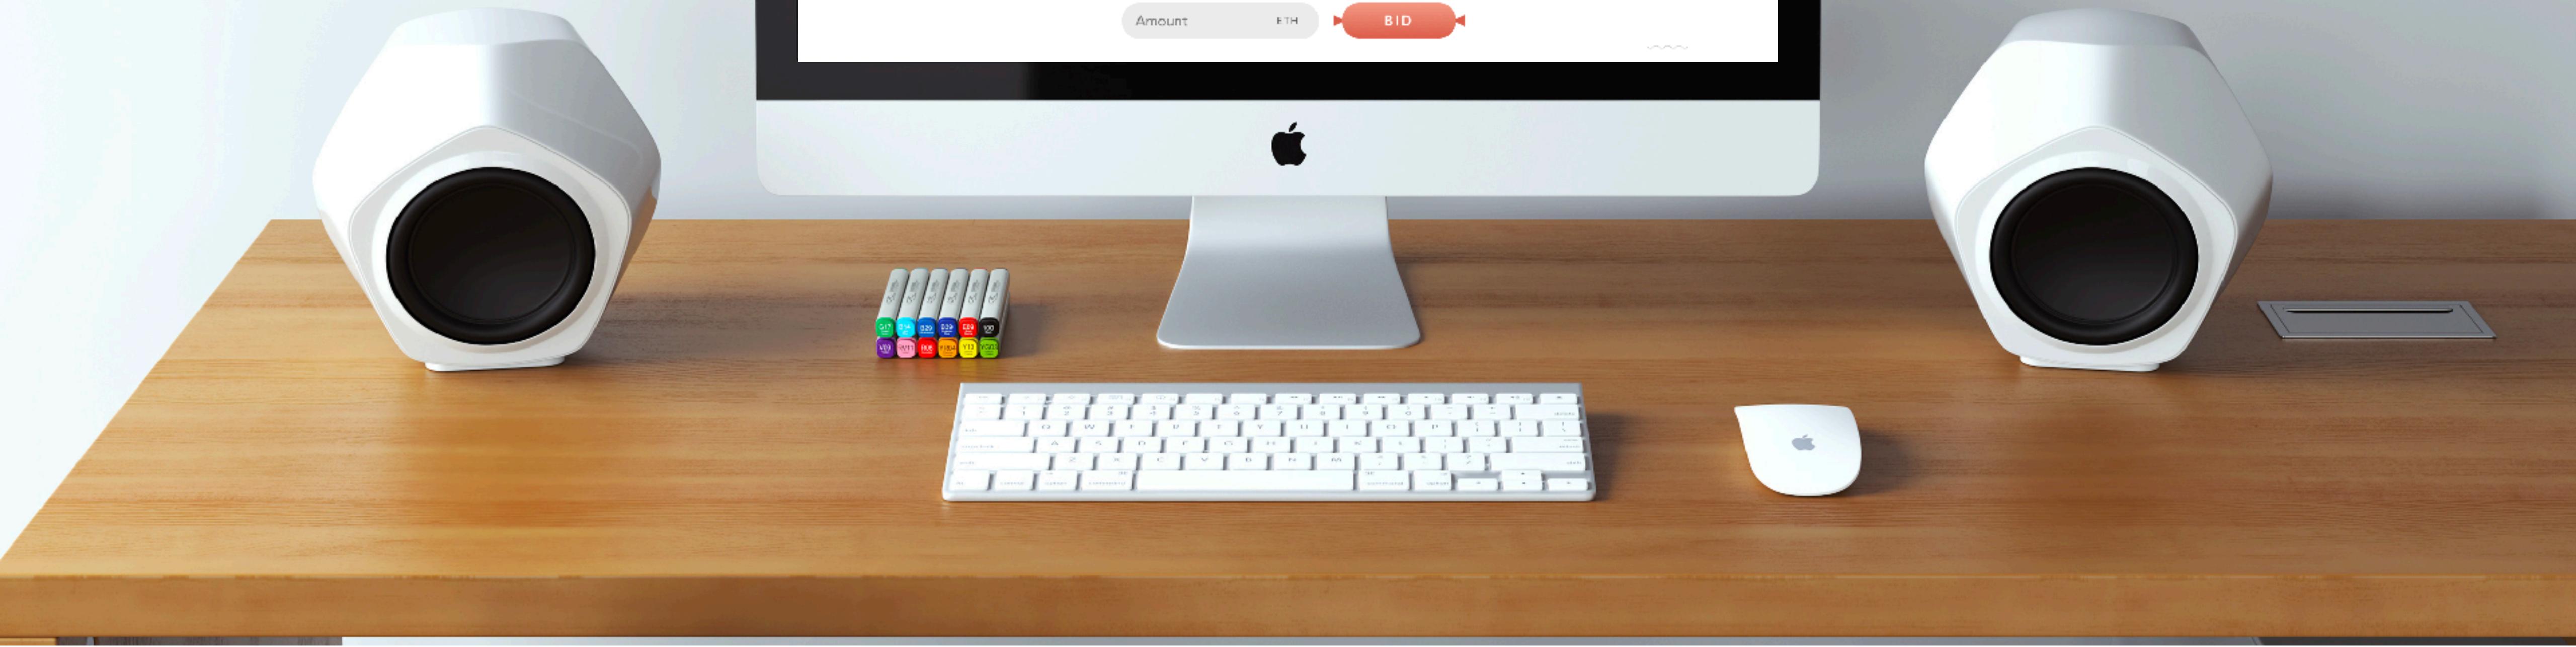

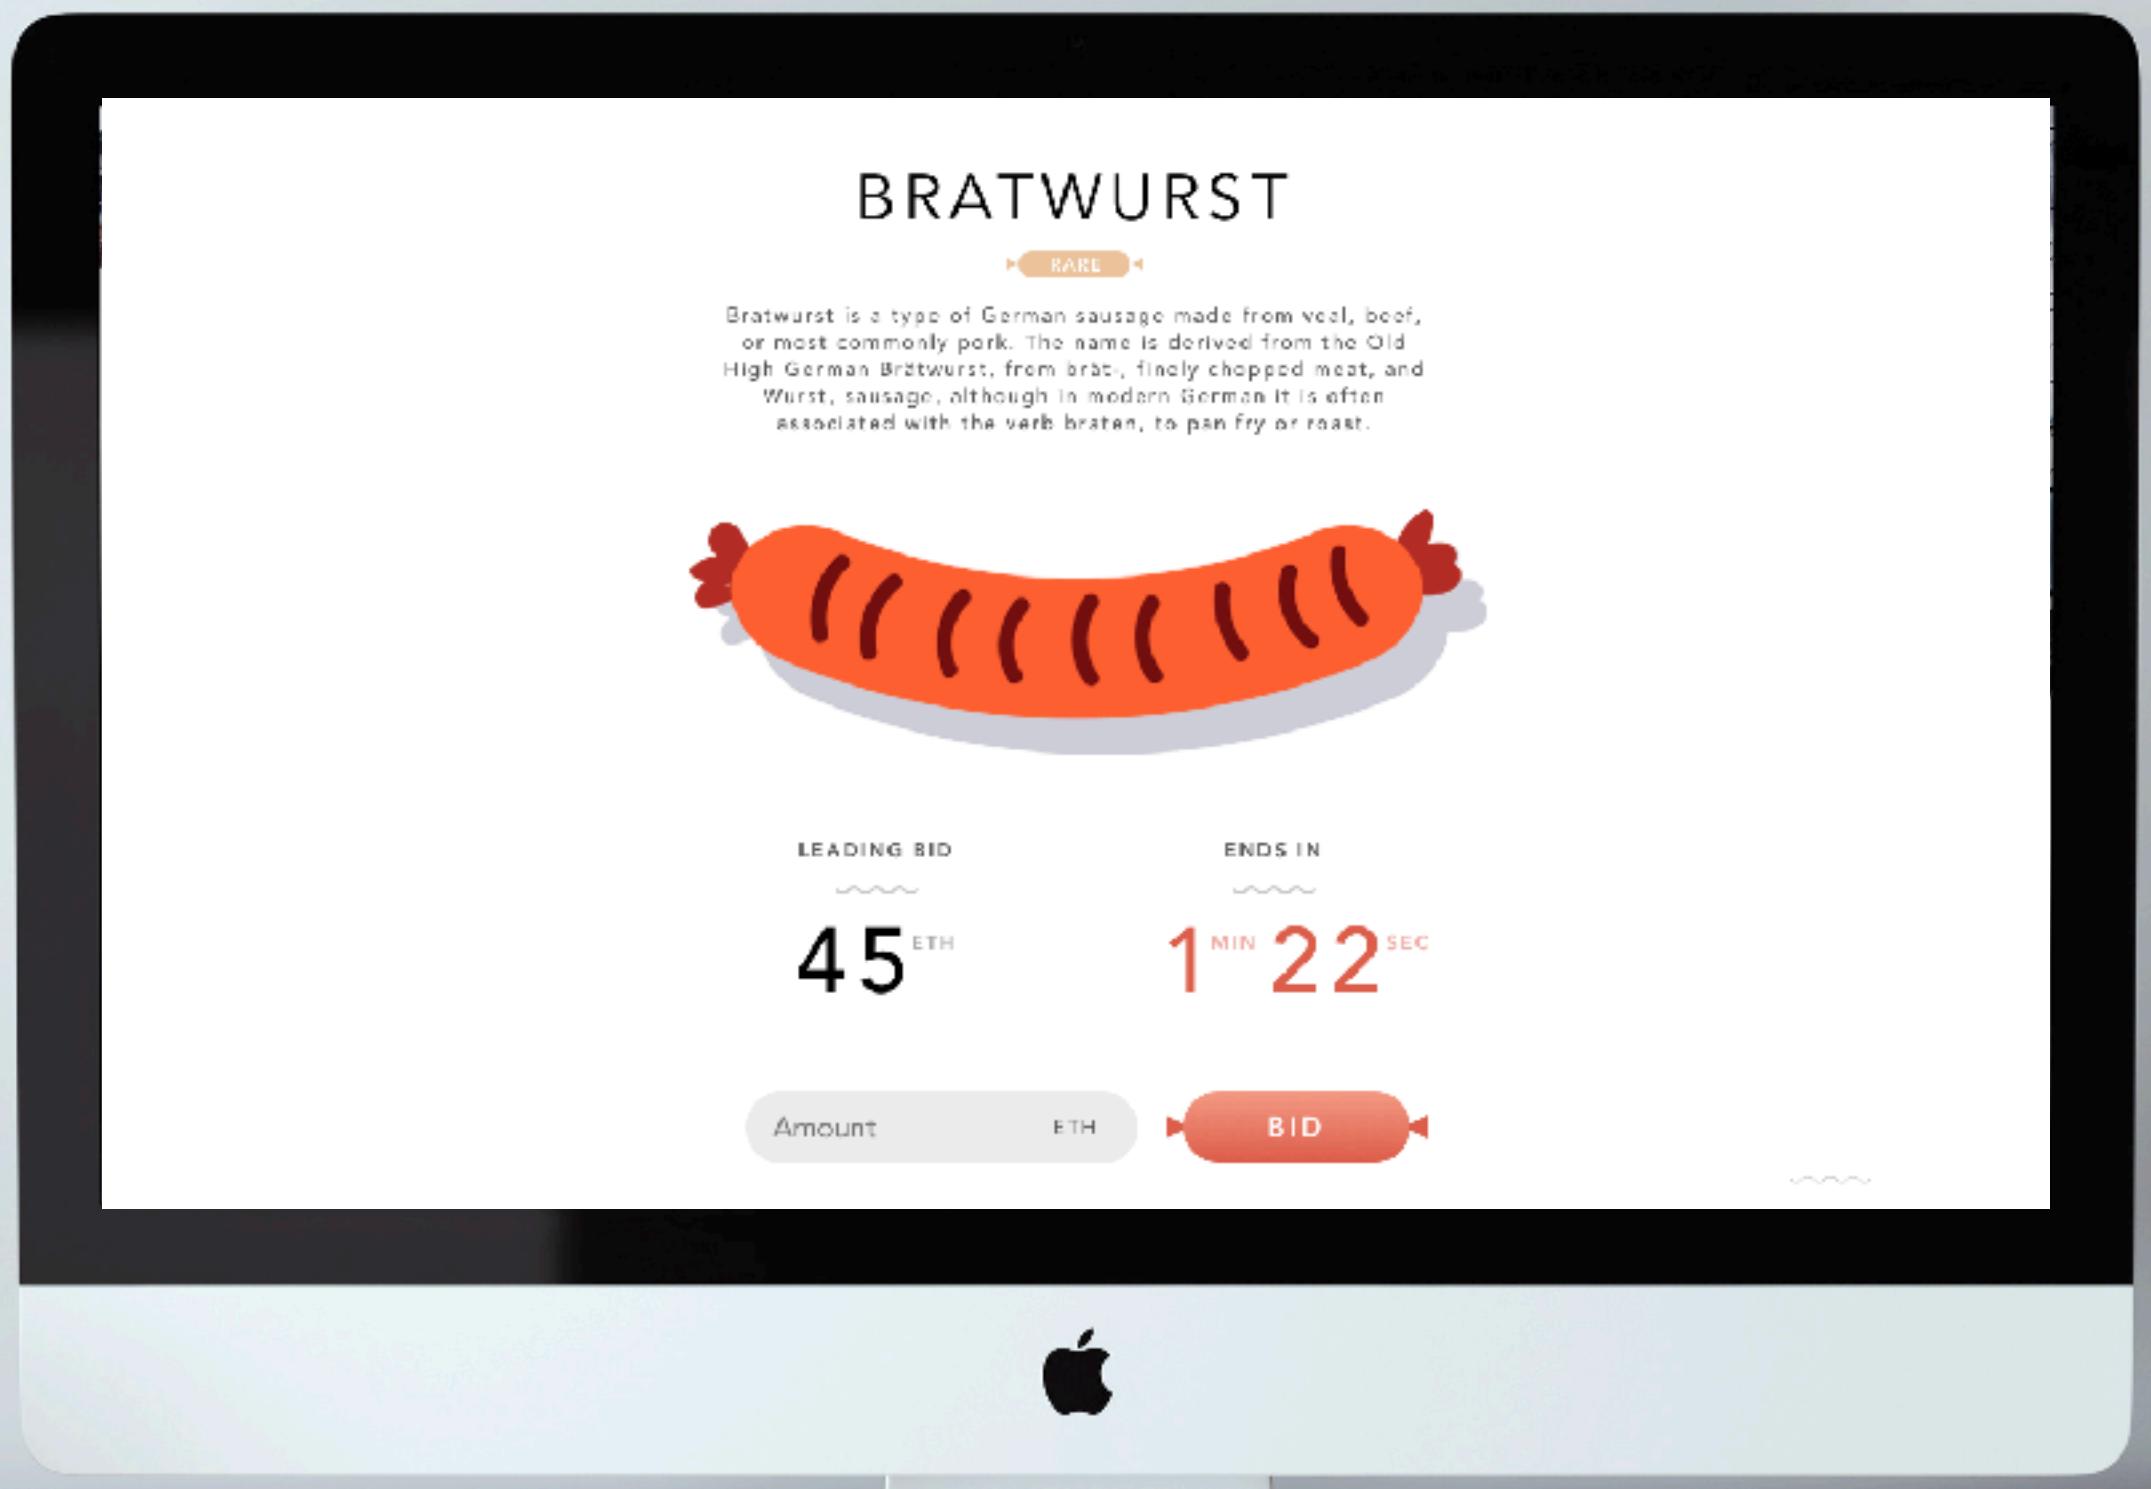

type User {
    id: ID! @unique
    name: String
    address: String
    bid: Bid
}

enum BitSausageType {
    CurryWurst
    Bratwurst
    Weisswurst
    Frankfurter
    Knackwurst
    Leberwurst
    Blutwurst
}
```

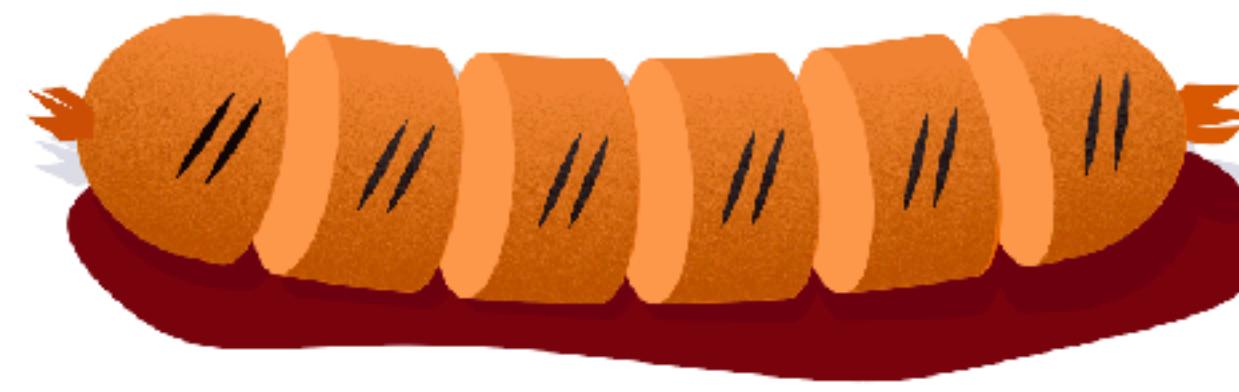

THE CONTRACT

```
1  pragma solidity ^0.4.23;
2  contract Auction {
3      address public manager;
4      address public seller;
5      uint public latestBid;
6      address public latestBidder;
7      uint public auctionSecondsLeft;
8      address public erc721TokenAddr;
9      bool public auctionLive;
10
11     constructor( address sausageTokenAddr) public {
12         manager = msg.sender;
13         erc721TokenAddr = sausageTokenAddr;
14     }
15
16     event LogNewBid(
17         address _latestBidder,
18         address _amount,
